

Marce' of North America Newsletter

DECEMBER 2022

Marcé
of North America

Promoting Perinatal Mental Health

2023 Membership Categories are open for renewal

Happy New Year!!

The 2023 Marce' of North America (MONA) Membership categories are now available for renewal and include a **Silver Level** International Marcé Society membership. All previous 2022 memberships will expire as of **January 1st** unless you purchased a two year membership last year. You can find out the status of your membership by logging in at <https://marcenortham.com/> or emailing marce@meetingachievements.com

BENEFITS OF MEMBERSHIP

- Discount on the MONA 2023 conference (see save the date below)!
- Free access to MONA webinars
- Listserv Access (including expert discussion on clinical challenges, posts about new programs and research studies and employment opportunities)
- Access to the online membership portal (including webinar videos, papers of the month, and other exclusive info)
- Access to special interest groups through Marce International <https://marcesociety.com/special-interest-groups/>
- Monthly Newsletter with privileges to share announcements such as job postings, awards, research and more
- **Silver Level Membership to Marce International - all members of MONA automatically become Silver Level members of the global organization**

Questions about Membership? Email Marce@meetingachievements.com

JUNIOR INVESTIGATOR DAY

Nurturing Young Investigators in Reproductive Mental Health
SCIENCE | REPRODUCTIVE MENTAL HEALTH | MOMS & BABIES

FRIDAY, FEBRUARY 10, 2023
VIRTUAL FORMAT

TARGET AUDIENCE:
Assistant Professors and below,
10 years out from terminal degree,
including residency and fellowship

APPLY WITH ABSTRACT SUBMISSION:
OPENING FALL 2022

 **Marcé**
of North America
Promoting Perinatal Mental Health

MONA JUNIOR INVESTIGATORS DAY

MONA Junior Investigator Day will kick off on Friday, February 10th with keynote speaker Catherine Monk presenting on *A Primer for Successful Research & NIH Funding*. In this workshop, we will discuss:

1. Defining/refining a research focus
2. Pathways to garnering NIH funding
3. The anatomy of a successful NIH grant application

In addition, there will be sessions on navigating research careers, as well as a career panel for all attendees. Junior Investigators chosen via the abstract submission process will participate in an afternoon of short presentations followed by small group mentoring with senior investigators. This is a unique opportunity to present, network, and brainstorm on research ideas (and how to transform them into specific aims) with leaders in the field of reproductive psychiatry. **Abstract submission has closed and mentees will be notified the week of December 12th.**

SAVE THE DATE!

Registration will be opening soon for this event! Stay tuned for more information!

MENTOR CALL OUT:

We are seeking individuals who would be willing to participate as mentors in the MONA Junior Investigator Day on Friday, February 10th, 2023. The time commitment on this date would be approximately 9-4pm EST. Ideally, it would be good for mentors to participate in the whole day, so they know what their mentees learned in the morning (although they only need to be able to interact and actively engage in the afternoon). As a mentor, you would attend virtual morning sessions (open to all MONA member), the presentations of the work of the junior investigators chosen, and then have a breakout session to work more closely with two of the junior investigators. We would ask that you provide guidance on the research being presented and provide support around developing a career in perinatal mental health research. We also would ask that the mentors review their two mentees research abstracts before they meet with their mentees.

Please also reach out to marce@meetingachievements.com

GHP Call for papers – Perinatal Mental Health

GHP Call for papers – Perinatal Mental Health

We are soliciting manuscript submissions for inclusion in a special issue of General Hospital Psychiatry titled, “Perinatal Mental Health.” In keeping with the usual article types for General Hospital Psychiatry, we welcome conceptual manuscripts, review articles, full original research reports, or brief communications.

This special issue will focus topics related to perinatal mental health including preconception mental health, infertility, and loss. We welcome articles that focus on mood, anxiety, psychotic, or substance use disorders during the perinatal period. We are especially interested in studies or papers that focus on:

- 1) inequities in perinatal mental health outcomes and approaches to address inequities;
- 2) risk vs. protective factors for perinatal mental health and substance use disorders;
- 3) patient and provider perspectives on how to address perinatal mental health and substance use disorders;
- 4) how adverse social determinants of health impact perinatal mental health and substance use disorders and approaches to address them; and, 5) interventions focused on addressing mental health and substance use disorders among perinatal and parenting individuals, with a focus on interventions implemented in settings that have not traditionally focused on mental health.

The goal of the special issue is to shed light on perinatal mental health, with a focus on the ways in which perinatal mental health and substance use disorders can be addressed in traditional and nontraditional settings to increase access to and quality of care. It is envisioned that the collection of articles included in this special issue will provide robust support for future research on perinatal mental health access and quality and have the potential to inform healthcare practices and policies. Findings from epidemiological and clinical studies, as well as clinical trials and review papers, are welcome.

General Hospital Psychiatry is an Elsevier Journal (PubMed/MEDLINE, Scopus, PsycINFO-indexed, Impact Factor 7.587) that focuses on linkages between psychiatry, psychology, primary care, and/or acute medical illness.

The call for papers is posted here: <https://www.sciencedirect.com/journal/general-hospital-psychiatry/about/forthcoming-special-issues>

Authors are invited to submit a full manuscript, **due January 15, 2023** (an optional letter of intent can be submitted by December 15, 2022). We anticipate that the special issue will be published in the summer of 2023.

Please email with any questions: martha.zimmermann1@umassmed.edu

Sincerely,

Series Editors:

Karen Tabb, PhD, MSW

María Piñeros-Leaño, PhD, MSW, MPH

Martha Zimmermann, PhD

December Paper of the Month: Overview by Madison Pomerantz, MD

MONA PAPER OF THE MONTH

Overview by Madison Pomerantz, MD

Association of Antidepressant Use During Pregnancy With Risk of Neurodevelopmental Disorders in Children. Suarez EA, Bateman BT, Hernández-Díaz S, et al. *JAMA Intern Med*. Published online October 03, 2022. doi:10.1001/jamainternmed.2022.4268

The Problem: Depressive disorders and use of antidepressant medications are common in pregnancy. Multiple studies have attempted to examine whether there is an increase in the risk of neurodevelopmental disorders in children exposed to antidepressant medication in utero. However, the results of these studies have been contradictory, and the link between antidepressant exposure and neurodevelopmental disorders has been controversial.

The Study: This is a cohort study that examined the association between antidepressant exposure in utero and neurodevelopmental disorders using healthcare utilization data. Data was obtained from the Medicaid Analytic eXtract from 2000 to 2014, which includes data from individuals with Medicaid across the United States, and the MarketScan Commercial Claims Database from 2003 to 2015, which includes data from individuals with private health insurance. Exposure was defined as at least one dispensing of sertraline, fluoxetine, bupropion, citalopram, or escitalopram during the time period from 19 weeks gestation through delivery (which is the time period during which synaptogenesis occurs). The unexposed group had no antidepressant medication dispensed in the time period from 90 days prior to pregnancy until the day before delivery. Children were followed for specific diagnoses including autism spectrum disorders, attention-deficit/hyperactivity disorder, specific learning disorders, developmental speech/language disorder, developmental coordination disorder, intellectual disability, behavioral disorder, and any neurodevelopmental disorder. Data was collected from birth until time of diagnosis, disenrollment, death, or completion of study period (maximum of 12 or 14 years). Results were analyzed to adjust for confounding variables by utilizing multiple adjustments for covariates, comparing individuals who discontinued the antidepressant soon before pregnancy to individuals who used antidepressants in late pregnancy, completing sibling analysis, and comparing early and late exposure windows.

The Results: This study examined 145,702 pregnancies exposed to antidepressants and 3,032,745 pregnancies without antidepressant exposure. Prior to adjusting for potential confounders, the findings

indicated an increased risk of neurodevelopmental disorders amongst children exposed to antidepressant medication in utero compared to those who were not. However, after accounting for confounding, exposure to antidepressant medication in utero was not associated with neurodevelopmental disorders in childhood.

The Conclusions: This study suggests that in utero exposure to antidepressant medication in isolation does not increase risk of neurodevelopmental disorders. However, the preliminary results prior to adjusting for confounders indicate that children exposed to antidepressants in utero may benefit from early screening for the onset of neurodevelopmental disorders.

MEMBER OF THE MONTH : Malina Spirito, Psy.D., M.Ed., PMH-C

Malina Spirito, Psy.D., M.Ed., PMH-C (she/her)

Director of Psychology Services-Center for Women's Emotional Wellness

1. What is your current professional role?
 1. I am the Director of Psychology Services at ChristianaCare's Center for Women's Emotional Wellness. We are a multi-disciplinary, integrated, practice dedicated to the care of the perinatal population and the treatment of Perinatal Mood and Anxiety Disorders. We offer outpatient psychotherapy and psychiatric medication management for individuals who are pregnant or postpartum within 1 year of delivery, as well as those actively engaged in reproductive assistance or those coping with an acute pregnancy or neonatal loss. We also provide inpatient consultation for the obstetrical units at our hospital system, consultation and brief solution-focused psychotherapy at our hospital-based OB/GYN practice, and education and peer consultation for our entire network of community and integrated OB/GYN and pediatric practices.
2. What drew you to the field of Perinatal Mental Health?
 1. My interest in perinatal mental health grew from a desire to support relational and family systems. I quickly realized that the transition to parenthood provided a natural access point to support family systems. From there, I witnessed and learned more directly about the prevalence and significance of PMADS and it all came together.
3. What is your current research involvement?
 1. Presently, I do not personally oversee any direct research projects. That said, I support a team that has several research projects underway, including exploring opportunities for nursing education to facilitate movement toward a Trauma-Informed workplace and another project involving the implementation of treatment for moderate-severe Postpartum Depression using brexanolone, on a mother-baby unit that supports rooming-in with baby and breastfeeding when desired.
 2. Our postdoctoral fellow and I also collaborate on a new clinical project, providing consultation services for potential gamete donors for a local reproductive assistance practice. We are deeply enjoying this new venture and hoping to expand our services for reproductive assistance practices in the near future!
4. What does a typical work day look like for you-including before and after work?
 1. Wow, my work days can be quite a blur! It starts with waking up and trying to squeeze in a quick yoga or pilates

practice before scrambling to get my 2 young kiddos ready for school. I drop my son off at his school and then drive my daughter to her incredible in-home daycare, which is fortunately right across the street from the hospital where my practice is located.

2. Work is a combination of direct-patient service, inpatient consultations, a few operational meetings, and then LOTS of supervision and consultation. I provide clinical supervision for a psychology resident, post-doctoral fellow, and a psychiatry resident, along with education for OB-GYN physician and nursing residents. I also provide weekly consultation services for a newly established perinatal mental health practice in another region of the country.
3. After work, it's a mad rush to get the children to and from their places, homework, dinner, lunches for the next day and the bedtime routine. If I can manage to stay awake after putting the kids to bed, I try to read before sleep!
4. I have an amazing husband who takes on a tremendous share of the load—I am incredibly grateful for his love and support!

5. What are you most excited about in your current work?

1. There are a lot of facets of my work; as a Director in a large hospital system, it would be easy to fall into tremendous administrative responsibility, at the cost of direct patient care. I make every effort to ensure that doesn't happen. Direct patient care, psychotherapy and consultation—especially around matters of loss and grief, are the heart of my work and where my passion truly lies. I have the greatest respect and gratitude to the patients who entrust me with their care and allow me to participate in their experiences and recovery, at what is surely an incredibly vulnerable time. Being able to witness and support healing and growth through the pregnancy and postpartum experience is a privilege, which I am honored to have. It is the most important thing and I hold it above all else in my professional role.

6. What's one of the most important things you've learned from a mentor or role model?

1. I've been blessed with a number of great mentors and role models—here are 2 important take aways for me:
 1. My first mentor, Dr. Traci Bolander is one of the most respected and successful psychologists I know and I was lucky to have her as a supervisor for both a practicum rotation and internship. She taught me to take risks—she taught me to say “yes,” and to not let modesty or insecurity or imposter syndrome stand in the way of potential opportunities. I learned from Traci that it is ok to change and evolve and take on new ideas and projects. I credit her with much of the opportunities and successes I've experienced to date.

2. My first two colleagues when I entered the perinatal mental health world, Megan O'Hara, LCSW, and Janet Brown, APRN-BC, have proven to be the greatest friends and role-models a person could wish for in this life. There aren't enough words to describe the incredible impact they have had on me, both professionally and personally. Perhaps most crucial though is the way in which they both supported me in being vulnerable through this process. They held space for me through my own transition to parenthood, with all its ups and downs, and the unique challenges this brings when working with the perinatal population. Their love and support allowed me to embrace the vulnerability (and humility) needed to get through this work of being a perinatal mental health provider, being a mother, and being hum.

7. What are your favorite things to do outside of work?

1. I love to read, hike, and lounge outside in nice weather and by the fireplace in cold weather.
2. Laughing with my dear friends is essential to my health and wellness!

8. What is the most interesting book, podcast, TV series, or movie you've encountered in the past year?

1. American Dirt, by Jeanine Cummins, is incredibly powerful. The poetic language and thoughts descriptions humanizes trauma in an eye-opening and visceral way (I especially encourage folks to check out the audio version). I am thankful to one of my dearest friends, Julie Russ, for encouraging me to read it, for it has truly had a deep, indelible impact on my soul. I now consider this book REQUIRED reading for everyone (that said, I realize the book was not without considerable controversy and I absolutely welcome the opportunity to hear others' perspectives on the book!).
- 

FORBES 50 OVER 50

Success has no age limit. The women—entrepreneurs, investors, creators, entertainers—on our second annual 50 Over 50 prove that every day. Some, like Diane Hendricks or Judy Faulkner, are billionaire founders of large companies; others, like Supreme Court Justice Ketanji Brown Jackson, are breaking barriers; still others are focused on the next generation like Success Academy founder Eva Moskowitz. All of them—200 in total, spread across four categories—are amazing. <https://www.forbes.com/50over50/>

OHSU: Associate Professor or Professor; Division Head

Link:

<https://facultycareers-ohsu.icims.com/jobs/19761/associate-professor-or-professor--division-head/job>

Description:

Associate Professor or Professor; Division Head

Department Overview

The Division of Reproductive Psychiatry and Behavioral Health was established in 2013 under the prior name The Division of Women's Mental Health and Wellness. It currently consists of 5 multidisciplinary faculty members (MD, PhD, LPC) providing high quality women's mental health care in outpatient and consultative settings. This division is a tertiary referral source for specialty Reproductive Psychiatric services throughout Oregon and SW Washington. Current specialty clinical areas of focus include but are not limited to Perinatal and Postpartum Psychiatric conditions, Infertility Consultation Services, Perinatal Loss, Female Sexual Dysfunction, Perimenstrual and Perimenopausal Mood Disorders, Coordinated Care in Primary Care; and biopsychosocial treatment of gynecologic cancer, urogynecology conditions, family planning, and other subspecialty care.

PMHNP Job Opening at ChristianaCare in Newark Delaware

We are actively seeking a **Psychiatric Mental Health Nurse Practitioner** (full time) to join our thriving **Perinatal Mental Health center, The Center for Women's Emotional Wellness, at ChristianaCare**, located in *Newark, Delaware*. [See attached PDF Flyer for more details.](#)

NP/PA, Center for Women's Emotional Wellness

https://careers.christianacare.org/jobs/NP_Center_for_Women_s_Emotional_Wellness/Newark_Delaware/101/282169/

Posting Job Description

ChristianaCare's Center for Women's Emotional Wellness (CWEW) is a nationally recognized mental health program dedicated to the identification and treatment of perinatal mood and anxiety disorders. We are currently looking for an experienced Nurse Practitioner to work with our multi-disciplinary team which include psychologists, licensed clinical social workers, psychiatrists, psychiatric mental health nurse practitioners, and psychology/clinical social work trainees. CWEW offers reproductive psychiatric consultation and medication management, evidence-based psychotherapy, and support & therapy groups for women in the perinatal period. We also offer compassionate care for families coping with pregnancy or neonatal loss, as well as reproductive challenges. CWEW clinicians provide supervision and training and present on a national level regarding PMADS and our unique service model.

We offer a flexible work schedule with a hybrid opportunity to promote a work/life balance

To learn more about our Center for Women's Emotional Wellness, please follow this link: <https://youtu.be/HkCBASy8sKg>

University of Virginia: Recruiting Junior Faculty Psychiatrist

The University of Virginia Reproductive Psychiatry Research Program is recruiting a junior or mid-level faculty who is interested in or conducts reproductive psychiatric research. Mentoring and protected time are part of the package! Contact Jennifer Payne at jlp4n@virginia.edu.

Faculty position at UC Berkeley Public Health

Assistant Professor/Assistant Researcher - Reproductive and Maternal and Child Health - School of Public Health

POSITION DESCRIPTION

The School of Public Health at the University of California, Berkeley invites applications for a 50% tenure-track Assistant Professor and 50% academic-year Assistant Researcher position in the Divisions of Community Health Sciences and Epidemiology. This split position will specialize in reproductive and maternal, child and adolescent health (MCAH) with an emphasis on social inequality and the developmental origins of health and disease. The MCAH program offers the opportunity for interdisciplinary collaboration with distinguished faculty and researchers at UC Berkeley and within the greater Bay Area. The successful applicant will be assigned a senior faculty mentor through our Junior Faculty Mentoring Program, and will also be provided with career development, guidance, and training to ensure a pathway to success.

We welcome applicants from epidemiology, demography, sociology and other related disciplines with a broad set of research interests, including but not limited to application of systems thinking approaches to pressing MCAH reproductive health challenges, exposures over the life course (including chemical, environmental and social factors), genetic/epigenetic pathways affecting reproductive outcomes, health inequities among historically marginalized groups in the United States, health in infancy and/or childhood, immigrant health, longitudinal modeling of life course health trajectories, applications of technology and innovation to MCAH, applications of policy analyses to advance health equity for MCAH populations, and evaluation of MCAH interventions particularly related to applied technologies. The teaching expectation is 1.5 courses per academic year at the doctoral, masters, and/or undergraduate levels. There will also be an assignment of service commitments at the school level.

Apply link: <https://aprecruit.berkeley.edu/JPF03593>

Help contact: monica.aiello@berkeley.edu

University of Illinois at Urbana-Champaign: Assistant Professor School of Social Work

The School of Social Work invites applications for a tenure-track assistant professor position with a starting date of August 16, 2023. We especially seek innovative scholars and teachers with a research focus on mental health, including but not limited to disparities in mental health, access to mental health care, severe mental illness and related effects, and the use of health technology to improve health and mental health access, equity and related outcomes. We likewise seek expertise in mental health curriculum development and course delivery in the mental health concentration, the largest of our MSW specializations.

Application Procedures & Deadline Information

Apply for this position using the Apply Now button at the top or bottom of this posting. Applications not submitted through <https://jobs.illinois.edu> will not be considered. Qualified applicants must create a candidate profile through <https://jobs.illinois.edu> and upload a cover letter, resume, a research-based writing sample, and the names, addresses, and telephone numbers of three professional references. Full consideration will be given to applications received by December 31, 2022. Interviews may take place before the closing date, but all applications received by the closing date will receive full consideration. All requested information must be submitted for your application to be considered. For further information about this specific position, please contact Debbie Richardson at drchrdsn@illinois.edu. You may also visit <http://www.socialwork.illinois.edu> for information about the School. For questions regarding the application process, please contact 217-333-2137.

APA Website with Spanish language information: La Salud Mental

Recently, the American Psychiatric Association (APA) launched LaSaludMental.org <https://www.psychiatry.org/patients-families/la-salud-mental>, a website hosting Spanish-language information and resources on mental health and substance use disorders that are culturally competent and evidence-based.

This site features resources on five of the most commonly searched conditions related to mental health: depression, domestic violence, stigma, substance use disorders and suicide. Additional conditions will be added in the coming months.

LaSaludMental.org <https://www.psychiatry.org/patients-families/la-salud-mental>'s content includes informational text, quizzes, expert Q&A in both print and video formats, infographics, printable handouts, animated explainer videos and more. While tailored to a Spanish-speaking audience, LaSaludMental.org <https://www.psychiatry.org/patients-families/la-salud-mental> is a bilingual site, with content available in both Spanish and English.

Let me know if you'd like to share access to this online resource via web links or other means so we can recognize your organization in our outreach efforts and on theLaSaludMental.org website.

U.S. Maternal Depression Screening Rates Released!

This month, the first set of U.S. maternal depression screening rates was released by the National Committee for Quality Assurance (NCQA).

The data set shows that less than 20% of the maternal population is being screened.

Read more from 2020 Mom (soon to be the Policy Center for Maternal Mental Health), here:
